SAC 403 Milk Dispensing System

“Putting a chill on milk...straight out of the box” exemplifies the next evolutionary step in selling milk, milk related and other beverage products. Our systems approach redefines for the milk industry the cost saving concepts behind true bulk dispensing, quality enhanced point of dispense temperature controlled, and instantaneous product brand-name appeal. Systems that draw upon years of proven technological and advertising capability, engineered to enhance beverage sales and marketing.

Fast Food – Why Milk Dispensing?

How does dispensing milk benefit fast food operations? Our dispensers allow you to serve drinks in the most beneficial locations, cuts down handling of packaged beverages, often less storage space required, allows you to offer more drink options and/or special promotional drink options, real milk shakes and malts and drink flavoring options, dispenses drinks at optimal quality temperatures. When it comes to marketing beverages, dispensing easily promotes good customer experiences that are always rewarded in increased visits and profitable sales!

What about coffee bar operations? Picture having a remote milk dispensing tower sitting on one or both sides of your espresso machine making it easier for your baristas to serve up all those coffee and specialty drinks quickly, opening up advantages in terms of refrigeration space and the reduction of clutter at the coffee bar. Less bending over, hand/wrist pouring and the restocking of awkward milk containers that slows production, leads to accidents, higher insurance liability and premiums, which are all unnecessary costs eating away at your profits. Further advantages are quick and clean restocking with greater on-line volume located in the back storage area that definitely promotes increased production during peak rushes by providing your valued customers more attention, crucial to the tasks of taking and filling orders quicker so as to serving more drinks efficiently.

Maximizing efficiency. By running a refrigerated remote trunk line from the back room storage we can branch off to different dispensing tower locations either offering different products and/or sharing product lines increasing product sales volume while controlling product and handling costs. The main service or drive-up areas are ideal. Realistically milk and other beverages offered only in plastic containers is limiting due to refrigerated storage in a fast food environment. But just like soda dispensers, milk/multi-beverage dispensing towers would offer your customers more drink options with multiple serving sizes.

Branching off to the milk shake machine could open up even further interesting drink creation options! Beverage smoothies, yogurts, even iced coffee flavored drinks can open new drink possibilities.

Continued evolution of drink-taste trends opens up more options and savings that just make sense. SAC remote dispensing systems offer more savings options worth considering when other beverages are considered. Iced teas, juices, smoothies, specialty coffee and milk based beverage creations can all be dispensed in a cost saving manner that utilizes less refrigeration storage, reduced handling and inventory concerns. Add drinks that appeal to the promotion of health that can catch the eye of parents and kids. Drinks are poured ice cold and fresh to maximize on quality. Our drink systems offer features that can help promote a healthier greener planet. Along with lowering refrigeration and electrical requirements and the use of air to drive the dispensing pumps, when selling dispensed drinks in biodegradable cups reduces environmental aspects pertaining to glass and plastic containers in regards to manufacture and disposal.

Better control means safer operations. Bag n box containers are the most sanitary, easiest to use and maintain bulk packaging on the market today. BIB's are offered in various sizes to accommodate pre-mix and/or post-mix ratio product blending beverage options that are developed for our SAC systems. You require inventory control - dates, processing plant, bar codes or any number of vital statistics that your operations require can be on each bib container. Our SAC 403 Milk Dispensing Systems were NSF tested and certified under Standard 18 – General Beverage Dispensing Equipment and Standard 20 – Bulk Milk Dispensing Equipment, assuring that system components and the simple four step BIB line cleaning procedure is safe and easy to operate and maintain.

Other optional sales opportunities are waiting. A SAC beverage systems approach is ideal for schools, colleges, university, cruise ships, hotel, casino, health care, military cafeteria operations along with airports, theme parks, and fast-food restaurants. Fast pouring dispensing systems open up possibilities for sporting events and concert venues where stand alone or co-branding with other beverage products can keep handling costs minimal while marketing your image and boosting profits. SAC 403 Dispensing Systems can even be outfitted on portable carts even shipped and installed overseas for international locations.
